

# SECURITY SCREW

# SecuTURN

Art. No. 2089xx.0

The patented security screw SecuTurn is used to limit access for screwed connections to authorised personnel.

Fields of application are profile cylinders and sensitive plants and machinery.

The security screw is forced apart at the end by using a thorn. This way it locks the screwed connection. Only by using a special tool, it is possible to fasten and loosen the screw.

By using the security screw only authorized personnel have access to the secured object. This way businesses can prevent theft and misuse.

The screw is universally applicable and can be applied in different fields.

#### Product details:

- » Measures: M5 x 40 mm, M5 x 50 mm, M5 x 65 mm, M5 x 75 mm
- » Weight: 0,01 kg
